EMPLOYMENT

Part-time Research Assistant, City University of Hong Kong (Sept 2023 – Present)

RESEARCH INTERESTS

Household Finance, Labor, Behavioral Economics & Finance

JOB MARKET PAPER

House Price Expectations and Consumer Spending. ([Link](#))

Won 2021 Best Summer Paper Award to Junior PhD Students, City University of Hong Kong.

Presented: Financial Management Association (FMA) 2023 Annual Meeting (Paper Session), Chicago, IL.

To be presented at:

American Finance Association (AFA) 2024 Annual Meeting (Paper Session), San Antonio, TX.

AFA 2024 Annual Meeting (Poster Session), San Antonio, TX.

Abstract: House price expectations significantly influence households' consumption decisions. Using experienced price growth (a weighted average of past price growth in local housing markets) as the expectation measure, I find that a one-standard-deviation increase in house price expectations leads to a 2% to 6% increase in real household spending. Results hold when using the experienced price growth of geographically distant relatives as an instrument. I further document no significant difference between the spending propensity of homeowners and renters exposed to the same level of experienced price growth, thus distinguishing the expectations channel from housing wealth and collateral channels.

WORKING PAPER

House Price Beliefs and Household Labor Supply. *(Draft available soon)*

Abstract: I identify the effect of house price beliefs on household labor supply decisions. Using experienced price growth (a weighted average of past price growth in local housing markets) as the belief measure, I find that higher house price beliefs significantly increase household labor supply at both the extensive (labor income) and the intensive (hours worked) work margin. Results hold when using geographically distant relatives' experienced price growth as an instrument. Effects are stronger among less sophisticated households, and there is no significant difference between the working propensity of homeowners and renters, thus distinguishing the belief channel from home equity channels.
